### What is CRI 90

#### CRI80

#### CRI90

### High CRI with LED

Color Rendering Index (CRI) describes how an object appears to the human eye based on ideal or natural light source. The CRI is an index, a measure, that tells something about how colors are represented by light coming from a certain light bulb, compared to how the colors are rendered with the light coming from a reference illuminant.

The CRI reports a unit less value, that can differ between 0 and 100. The value 100 means that there is no difference in color rendition between the light of the observed light bulb and the light of the reference illuminant. Lighting with a CRI of 85 to 90 is typically "excellent" at rendering colors of objects while CRI90 or greater are "superior".

## DIMENSIONS

### A19 (E26 Base)

1.67-oz

### A19 (GU24 Base)

1.80-oz

## PACKAGE

Case Qty 20 pcs (10 for inner package)
